

Instructions on how to use the TSCEvolTree_ForamFamilies_GTS2020.dpk file

After using "Add Datapack" to add
TSCEvolTree_ForamFamilies_GTS2020.dpk, "Load" the corresponding .tsc file in the "TSC Settings window" to get the best initial view of the evolutionary tree.

In tab "Choose Columns", highlight Column, "Phylogeny and Classification of Families of Foraminifera according to Loeblich & Tappan": to avoid cut-off of righthand margin of chart, Margin (which defaults to 0) may need to be set to 2 (or higher, e.g., 6), depending on your display.
